Ordering code: Contactor for battery voltages, bistable version

Example: **C163 C/ 24BD-J1 001**

Series	C163	Special design	001	Made for customer ...	
Contact type	C	NO, bistable	Type and # of auxiliary contact*	U	S870 silver-plated
				J	S870 gold-plated
				1	Number of
Coil voltage	24	24 V DC	Coil suppression	D	Diode
	60	60 V DC		X	none
	110	110 V DC	Coil tolerance	B	-30% ... +25% U _n

* Microswitch (to be ordered separately), 1 switch max. possible.

With the bistable type of contactor the change of state: „contact normally open“ and „contact closed“ is triggered by a short switching impulse of only 50 msec. duration. Both normal and total travel position are stable. That is to say that no coil power is needed for either position. The benefit of this drive concept: **No energy consumption during continuous duty!**
