UNIFORM S

UNIFORM S DISPLAY

Uniform S is a display designed to show in real time the information processed by the various TER supervision systems. From simple optional device used to display wind speed, it can become an indispensable instrument to check in real time the safety conditions of the most sophisticated machines monitored by Echo.

A set of optional devices makes it possible to adapt this interface system to any system and to any lighting condition: it is possible to select language, contrast, back lighting and sound level.

The construction architecture of this product makes it suitable for use outdoors even in extreme weather conditions.

Uniform XS is supplied with a universal support so it can be easily and quickly installed in any position.

UNIFORM S DISPLAY
