UNIFORM XS

UNIFORM XS DISPLAY MODULE

Uniform XS is an important operating interface designed to display in real time the information processed by the various TER supervision systems, to set up functions and modify the operating parameters of Echo and Golf. Uniform XS receives/sends data via serial line.

Thanks to an effective intuitive logic it can manage all the menus with 4 cursors, to set the alarm thresholds, display information on activations or simply select the language.

Uniform XS integrates perfectly into radio activation systems thanks to its modular logic or, alternatively, it can be easily mounted separately inside the electrical panel thanks to the standard DIN bar and the supply module.

Uniform XS is available in a wide range of voltage ratings.

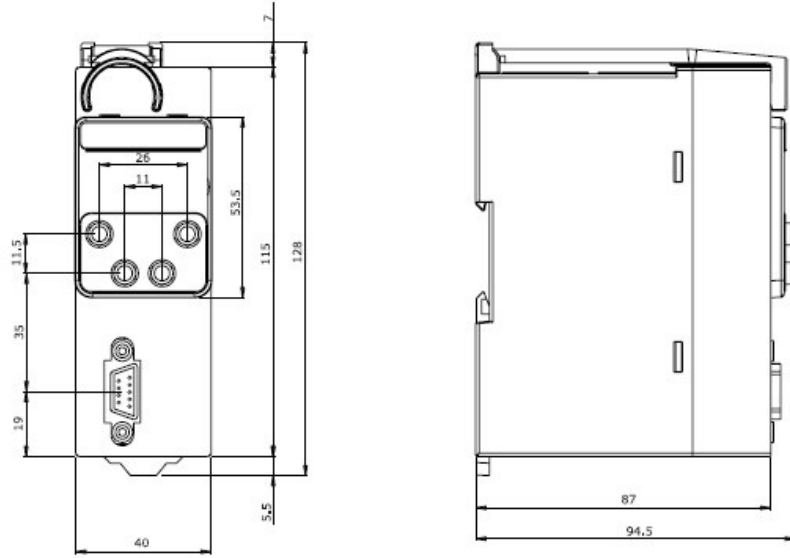

UNIFORM XS DISPLAY MODULE

TECHNICAL SPECIFICATIONS

Conformity to Community Directives	2004/108/CE
Conformity to Standards	EN 61000-6-2/4
Markings	CE
Monochromatic display	2 lines x 12 characters
Communication	RS232
Power supply	12VDC
Operating temperature	0°C + 55°C
